

# INTEGRYS

Connecting Technology & Innovation

## You say Core, I say Heart

### Imaging

Smart Cameras – you may have been hearing a lot about them, or seen them show up in the IntegrYS Camera Finder on our website. So how smart are they? They are smart enough to know you should take a look at them.

This new generation of camera incorporates a processing engine and camera housing with light control, input-output and all within an IP-rated enclosure. A smart camera brings integrated analysis capability which historically was only offered through use of many separate components. Couple this with easy to use integrated software with these impressive cameras, and an image is worth thousands of sensors! For an example of a next generation smart camera, check out the latest release from Matrox, the [Iris GT](#).

### Embedded Computing

Take your embedded computer on the ROAD with new mobile embedded technology. Low-cost, high performance embedded mobile computing just got a little better with ADLINK MXE1000. Imagine a low-power embedded computer working off as little as 6VDC operating -20+70C and meeting high shock and vibration certifications. Now add video and data acquisition and display and you're ready to hit the road for all your mobile computing needs. [Contact IntegrYS](#) today for more information on this exciting new solution.

At **IntegrYS**, when we discuss our Core Engineering services, we do it with heart. With fifty years of Engineering background, we know what needs to be at the heart of our service to you. We start with the Statement of Work – a service guarantee. A detailed needs assessment allows us to determine what we need to provide – and we'll guarantee that we do!

Check out our website for all the things that go into [Core Engineering Services](#), and you'll see clear evidence of our thoroughness and experience. But our heart really shines through when it comes to tackling those special situations that others won't even think about. Our engineering group helps our customers by providing specialized out-sourced engineering in imaging and harsh environment computing. You rely on us to help you get to market on-time and on-budget.

In your business, you may be subject to audits, governmental and third party regulation & inspection. IntegrYS will help you prepare for these, even developing an audit plan. And of course we'll also help you gather & prepare all the required support documentation for both technology and processes.

And experience really shows when it comes time for obsolescence and update planning. IntegrYS engineers can work with you to prepare for both the inevitable, and the unforeseen, to ensure continuity of operations and supply chain. We've seen what happens when you don't take this into consideration, and use our experience to protect you.

**IntegrYS** Engineering has great experience in ruggedized computing, and imaging applications. Matching our experience with heart – that's how we define **IntegrYS Engineering Services**. Be certain to check out the [Services](#) section on our website for much, much more.

### Where's Waldo's Camera?

Does searching through a catalogue of cameras to find exactly what you need feel like you're in a live action Where's Waldo? We've made the process of camera selection a breeze – with our newest technology search tool, the **IntegrYS Camera Finder**. Plug in your criteria in drop down boxes (e.g. colour, smart camera, USB, 10K linescan) and you'll see a short list which matches your needs. Click the link for full specs. Best of all – it's independent of manufacturer, so you can see results from the full range of our video and imaging technology partners.

To see the **IntegrYS Camera Finder** in action on our website, click [here](#).
